Example

20 figures firing at 14% chance of hitting.

1. Find the chart 14.
2. Throw the percentage dice and read down the 10 figure column until you reach the number immediately higher than you threw.
3. Read across to the left-hand column to find the number of hits caused.
4. eg. a dice throws 53 causes one casualty!
5. Throw again for the second 10 figures to give the rest of the casualties.

SIMPLE ISN'T IT?
